

GLADIATOR

2022

SALE@GLADIATORBOAT.COM
WWW.GLADIATORBOAT.COM

Tens of thousands of Gladiator boats and motors delivered to customers over 10 years of operation of our group of companies have made our brand one of the leaders in Russia and allowed us to be the first company to enter international market.

Today Gladiator is the global international Brand with its own history and specific approach. GLADIATOR was created as a dream when several residents of the Far East decided to connect their lives with motors and boats

and after successful experience understood that they can produce by themselves premium-class product with reasonable price.

Such strategy helped to make a dream come true about people's rest on water and made Gladiator a recognizable brand among other producers, that became the first step of the company to Leadership on the market.

Thanks to the extensive working with China the company's management was able to take production quality under control and later on open its own factory in China in Weihai city. And since then, the Gladiator Group of companies more successfully combined premium quality of the boats with affordable price, that immediately affected sales and allowed to enter global level opening representative offices in 20 countries.

YOUR DREAM COMES TRUE

To date, Weihai Black Sea Marine co.ltd has more than 200 employees in its own factory, the annual output is more than 10,000 PVC boats, 80,000 SAP boards and 10,000 outboard motors.

Without stopping there, in 2020 Gladiator Group of companies opened a branch for the production of PVC boats in Russia.

One of the key advantages of Gladiator is versatility, in our model range there is an opportunity to choose a boat and a motor for any task.

Our test engineers continue to conduct their own design developments, continuously improving Gladiator boats.

ADVANTAGES OF GLADIATOR INFLATABLE BOATS

HIGH QUALITY MATERIALS:

- all parts of Gladiator boats are made of proven and reliable materials from world top manufacturers
- the manufacturer uses Russian moisture-proof laminated plywood FSF, PVC and glue produced in South Korea

RELIABILITY

- in tubes there are leak-tight partitions dividing them into at least 3 compartments, which allow the vessel to remain buoyant in case of failure of one or two compartments
- all seams are made using the "overlap" gluing method, which imparts reliability to each seam and to the structure as a whole
- all GLADIATOR boats have additional mechanical protection of tubes and keel in the form of armored tape 20 and 8 cm wide
- reinforced lock's structure of floorboards prevents the boat from folding while in motion, even in models over 4 m long
- most boat models are equipped with pressure relief valves to prevent failure of tubes resultant from overheating in sunny weather
- warranty for material - 5 years, for seams - 3 years, for components - 1 year

STRICT CONTROL IN ALL PHASES OF PRODUCTION

All phases of production are controlled by the Quality Control Department. Each finished Gladiator boat is subject to a three-day test in inflated state. Statistics received from service centers since 2013 show record-low rejection figures - less than 1%, which is difficult to achieve even by the best known manufacturers.

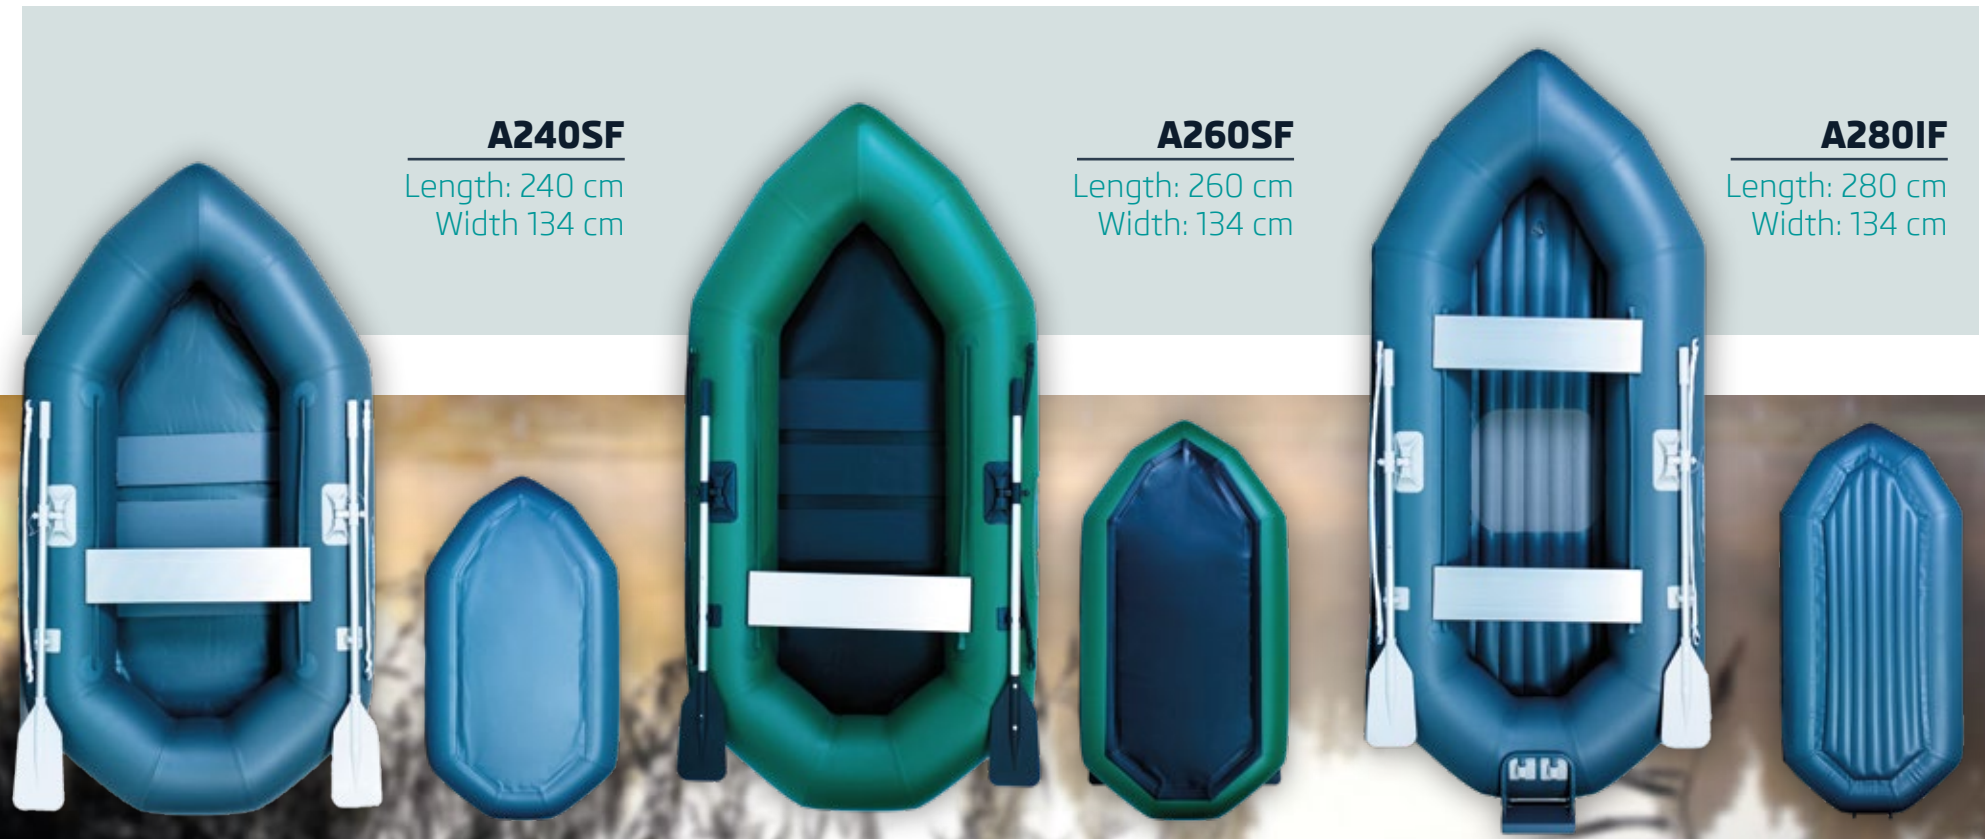

WIDE MODEL RANGE

- There are 7 series for every taste and wallet, more than 100 models for a variety of operating conditions
- the choice varies from an affordable rowing boat, to RIB and models for extreme rafting
- all flooring types: aluminum, plywood, low pressure air deck bottom
- delivery set: from basic to "all inclusive"

INSPECTED BY EXPERTS

All Gladiator brand products have international CE certificate, certificate of compliance with the requirements of Technical Regulations of the Customs Union as well as EAC certificate.

GLADIATOR PVC inflatable boats of the Rowing Boats series starts with A-SF and A-IF models (hung transom, inflatable floor). These models are designed for fishing, hunting, and recreation on still/low current bodies of water.

A-SF (Slatted Floor) GLADIATOR rowing boats are made of high quality polyvinyl chloride with the density of 850 g/m². Standard set of accessories includes a seat and plywood floor insertion.

A-IF (AirDeck) - keelless motor-rowing boats with a hung transom and glued-in inflatable floor. They feature compact size of a rowing boat and a possibility to install a low-power boat engine.

COLORS:

WARRANTY

- 5 YEARS** PVC materials
- 3 YEARS** seams
- 1 YEAR** components

A PERFECT WEEKEND

THEIR ADVANTAGES ARE OBVIOUS:

- Easily packed in a single bag and might be transported in a trunk of any vehicle without any cumbersome assembling-disassembling. Just inflate the boat and it is ready to go.
- No hard floor with stringers, which makes the cockpit sides less abraded
- Keelless and, as a result, flat floor, which significantly reduces water resistance. The boat can be used as a hydroglider by installing a lowpower engine.
- It is not recommended to use boats of this series on large water bodies, in presence of strong water current, and in windy conditions

The next in the Motor Boats Light series are the boats of **AK-AD (AirDeck)** and **AK-SF (Slatted Floor)** models. These boats offer unique design with a fully-featured glued-in transom made of laminated waterproof plywood. Due to this fact, you can install a hung boat engine with capacity up to 15 h.p. depending on the boat length. Motor Boats Light series boats are made of 0.7 mm (850 g/m²) polyvinyl chloride, which ensures protection and small weight.

COLORS:

AK-AD (AirDeck) model includes keeled motor-bowing boats with a glued in transom beam and Air Deck floor. It combines small weight, extended load capacity of the boats with an inflatable floor, and the possibility to install a low-capacity boat engine at a stationary transom as in the case of full-featured motor boats.

AK-SF (Slatted Floor) model includes keelless motor-rowing boats with a glued-in transom beam and Slatted floor. It features small weight and the ease of assembling comparable with the Rowing Boats series, while possessing a hard stationary transom beam, which allows to use a more powerful engine.

AK (Wood Floor) can be considered as the initial model of the motorized series. It features a glued-in transom and rigid plywood floor and a full-featured inflatable keel. AK-WF boat has a moderate price and small weight

Affordable premium at the price of the middle segment and nothing superfluous, only reliability and thoughtfulness of every detail. Everything is advanced that is in the boats, but due to competent logistics and wholesale purchases of materials, we managed to keep an affordable price.

Gladiator boats of the "LIGHT" series are a basic series of inflatable keel boats with a stationary transom as standard for fishing, outdoor activities on reservoirs of any type without an aggressive external environment. The boats are made of PVC with a density of 850 g/m² (bottom 1100 g/m²) and have improved running characteristics due to the smooth cut of the balloons. All modifications from this series are equipped with a valve for automatic relief of excess pressure in case of excessive pumping or overheating of the balloon in the sun.

All Light series boats come with plywood flooring with anti-slip notch with a set of aluminum stringers. The most convenient type of flooring to use: it freezes less, does not hurt, it is impossible to scratch or puncture.

Gladiator boats of the "LIGHT" series are a basic series of inflatable keel boats with a stationary transom as standard for fishing, outdoor activities on waters of any type without an aggressive external environment. The boats are made of PVC density 850 g/m² (bottom 1100 g/m²) and have improved driving characteristics due to the smooth cut of the balloons. All modifications from this series are equipped with a valve for automatic relief of excess pressure in case of excessive pumping or overheating of the tube in the sun.

MODELS:

AL - aluminum footlings with anti-slip notch with a set of aluminum stringers. The most convenient type of flooring to use: it does not need to be dried, it is impossible to scratch or puncture.

AD (AirDeck) - is a removable monolithic high-pressure inflatable bottom. Due to the high pressure, the bottom is not pressed under the weight of a person. The main advantage of AirDeck is its lower weight compared to other types of floorings.

Super premium boats with aluminum flooring, increased strength and carrying capacity from a professional series with rich and thoughtful equipment.

The "ACTIVE" series presents boats with an expanded configuration and a more reliable stringer fastening system, thanks to which it is possible to achieve better fixation of the payoles and bottom tension. Boats of this series are made of PVC with a density of 1100 g/m².

EQUIPMENT:

- Comfortable padded seat pads
- Removable seat bags for things and supplies
- Bow awning for protection from splashes, rain and wind
- A nose bag for things to stay dry for the rest of the trip

Reliable tubes armor and keel protects the boat from punctures and damage. A wide selection of colors, including a spectacular exclusive - "digital camouflage", will emphasize your personality and give you the opportunity to stand out against the background of gray and green boats passing by.

The ACTIVE series is equipped with aluminum solder with anti-slip notches (AL).

Motorboats with a low-pressure inflatable bottom GLADIATOR AIR is a universal solution for most tasks. AIR SPORT has repeatedly won the championships in water-motor sports.

COLORS:

Compact:

Easily packed in one bag and placed in the trunk of any car: no tedious assembly-disassembly- the boat just needs to be pumped up

Damage resistance:

- The most vulnerable places of the lower part of the boat: the keel, part of the tube - in the place of contact with the ground, reinforced with polyurethane tape armor
- The boat does not have a rigid floor with stringers, so the sides inside the cockpit do not wear out
- The transom is located on a cushion that protects it from collisions with a rocky bottom or boulders at the bottom of the river

Engineering solutions

- The widest cockpit in its class
- Stiffer transom to improve planing
- Wider seats - 30 cm
- The special design of the bottom ensures a soft glide on the wave

Modification SL is a lightweight version of Air Sport boats for use in conditions that do not require additional protection of the bottom and tubes and allows you to save your money. Both versions S and SL are equipped with PVC tubes with a density of 850 g/m², the top of the bottom with a density of 1100 g/m². Antislip and the bottom with a density of 1100 g/cm².

WARRANTY

- 5 YEARS** PVC materials

GLADIATOR motor boats with an inflatable bottom of low pressure is a versatile solution for most tasks. Versatility and premium quality, rich equipment and excellent compactness thanks to a low pressure in inflatable bottom - all this is the AIR PRO series.

COLORS:

Due to the denser PVC fabric on the tubes and the more pronounced keel, these boats are distinguished by increased seaworthiness, and the rich equipment significantly distinguishes them from competitors.

Compactness:

Easily packed in one bag and placed in the trunk of any car: no tedious assembly-disassembly - the boat just needs to be inflated

Damage resistance:

- The most vulnerable places of the lower part of the boat: keel, part of tube - at the point of contact with the ground, reinforced with polyurethane tape armor
- The boat does not have a rigid flooring with

stringers, so the sides inside the cockpit do not wear out

- The transom is located on a cushion that protects it from collisions with a rocky bottom or boulders at the bottom of the river

Premium package:

- Bow awning on an inflatable arc, protecting from splashes
- Padded seat pads with seat bags to keep things clean and dry
- Anti-slip coating on the cockpit flooring

GLADIATOR AIR PRO. Made in China

*boat, paddles and seats

E-PRO - balloons PVC 1100 g/m².
Bottom top 1200 g/m². Antislip, bottom 1350 g/cm².

Scope of delivery

- 2 aluminum paddles
- 2 aluminum seats
- Glued inflatable bottom (low pressure)
- Overpressure relief valve
- Seat covers with bags
- Fixture mast track, leech rope
- Fender guard
- Towing handles, plastic
- PVC passenger handles
- Bow awning on an inflatable arc
- Anti slip floor covering
- Anchor rope holder
- Railing rope
- Bravo 9 Foot pump
- Boat Bag
- Repair kit
- Balloon armour
- Nose ring handle (metal)

KIT CONTENTS

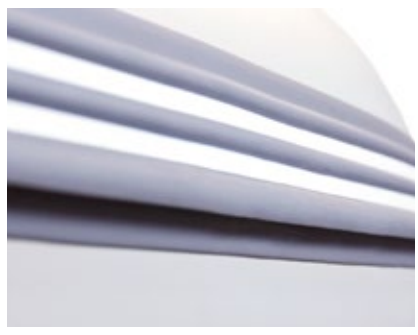

1 High-quality **nose ring handle** made of stainless steel. Clean and neat pasting.

2 **Rotary rowlocks:** reliable solution, strong materials, high quality

3 **A fender guard.** Stylish and reliable, protecting your boat

4 Collapsible **aluminum paddles** are strong and reliable

5 **Tow handles** made of high-quality plastic

6 Strong **passenger handles** made of durable PVC with high-quality pasting

7 The **bow awning** is a convenient and practical accessory included in the package

8 The **transom cushion** is our development for better planing

9 The **overpressure valve** is a guarantee of safety in any weather

10 **Клапан наддува** - залог безопасности при любой погоде

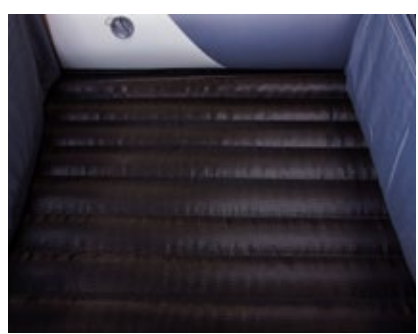

11 **Tube armor** - additional protection and safety guarantee

12 **Keelguard** with protection of vulnerable places - a guarantee of the quality of your holiday

13 The **upper non-slip layer** of PVC 1200 g/m², the lower layer of PVC 1350 g/m²

14 **Aluminum seats** equipped with a practical soft pad

15 The **bag under the seat** is a convenient accessory included in the set of this series

E380PRO
 Length: 380 cm
 Width: 181 cm

The universal option is the richest equipment in its class, balloon PVC 1100 g/m², special bottom construction: upper non slip PVC layer 1200 g/m², lower PVC layer 1350 g/m². Low pressure inflatable bottom. Unsurpassed use convenience!

RIB 350AL
Length: 350 cm
Width: 173 cm

RIB380AL
Length: 380 cm
Width: 173 cm

RIB420AL^a
Length: 420 cm
Width: 195 cm

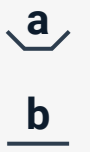

WARRANTY

- 5 YEARS** PVC materials
- 3 YEARS** seams
- 1 YEAR** components

The 420AL model is available in two versions a and B:
 ● a - the bottom has a curved shape
 ● b - the bottom has an absolutely straight shape
 Transom :
 ● Aluminum RIBs - transom size S, transom size L can be ordered
 ● Plastic ribs 320/360 cm - transom size S, 420 cm - size L

BUILT FOR SPEED

RIB – high-speed boats consisting of a rigid ungainly frame-forming bottom and inflatable multi-chamber PVC tubes. The rigidity of the frame allows you to give the bottom a clear outline, which provides the keel the most effective angle. On boats with an inflatable or footling floor. it is simply impossible to achieve this, therefore

COLORS:
Individual color scheme on demand

RIBs are many times superior to conventional PVC boats in terms of stability, speed, comfort for passengers and the ability to get on the glide with less effort. Inflatable sides allow Rib to moor anywhere unlike boats with rigid sides. They consist of several inflatable balloons, which guarantees almost complete unsinkability of the watercraft. Therefore, most rescue operations and interceptions at sea take place with their participation. They are actively used by the military and rescuers. The tubes are made of PVC density 1100 g/m² (thickness 0.9 mm).

The bottom can be made in 2 versions: fiberglass or aluminum.

RIB bottom is a 0.7 cm thick plast-composite fiberglass (7 layers)
 The bottom of RIB AL is shipbuilding marine aluminum Amg (an alloy of aluminum with magnesium) with a thickness of 3 mm. It provides high corrosion resistance in working conditions with seawater. Marine aluminum is also characterized by good weldability and high strength. Powder painting.
